2010 Lewis & Clark County
Traffic Count Program Update Summary

In June 2010 Abelin Traffic Services contracted with Lewis & Clark County to perform traffic counts for the County's Traffic Count Program. The Traffic Count Program is an important tool for engineers and planners to help determine growth characteristics within the county and determine where maintenance funds should be spent. Abelin Traffic Services (ATS) has previously overseen the Traffic Counting Program from 2006 to 2009.

The goal of the 2010 counting program was to update all of the previous year's standard traffic data. In all 117 regular sites, 20 MDT, and 6 'Special' sites were counted for a total of 143 count locations. Traffic count data for these locations was collected between the months of June and October 2010. No traffic count data was collected on weekends or holidays.

The raw data collected within Lewis & Clark County during the 2010 traffic counting season was then factored to an Annual Average Daily Traffic (AADT) volume by using the MDT Portable Vehicle Combined Count Factors. These monthly traffic factors are available from MDT each year for different classifications of roadways based on MDT's historic traffic volume information. The data provides a monthly factor which is used to determine an accurate AADT traffic volume no matter which month the counts were performed. The monthly count factors used for 2010 are included with this report.

After the traffic data was collected the raw hourly data was exported for each site. This data was then transferred into a Microsoft Excel worksheet and factored to produce AADT traffic volumes for each location. The factored data was then assembled into a book with the same format as was used on the traffic booklets created for previous years.

The data collected by ATS indicates a small (~1%) increase in traffic volumes from 2009 to 2010. The largest factor effecting traffic volumes within the County in 2010 was from the completion of the western portion of Canyon Ferry Road. In 2009 a considerable amount of traffic was shifted from Canyon Ferry Road onto other area roads during the construction process. With the completion of construction, the traffic volumes on York Road, Wylie Drive, Valley Drive, and Lake Helena Drive have resumed close to their 2008 volume levels. It should be noted the traffic counts taken on Canyon Ferry Road in 2009 were collected after the road was re-opened late in the fall and did not change considerably from 2009 to 2010.

The following is a summary of where most of the traffic variation has occurred within the Helena Valley in 2010. These major roadways (+500 VPD) had greater than 10% traffic growth or decrease between 2009 and 2010. This does not include the re-shifting of traffic volumes back to historic volumes around Canyon Ferry Road.

- **Applegate Drive -** Traffic volumes have decreased 10% on average over the entire length of this road, reversing the upward trend from 2009.

- **Birdseye Road** - Traffic volumes increased 14% north of Barret Road continuing the trend from 2009.
- **Canyon Ferry West of Wylie Drive** – Traffic volumes have increased 16% since 2009. Traffic volumes along this portion of road have increased steadily over the past 10 years.
- **Franklin Mine Road West of Green Meadow Drive** – Traffic volumes have increased 19% from 2009.
- **Floweree Drive** – Traffic volumes increased 36% north of York Road.
- **Howard Road** - East of Wylie Drive traffic volumes increased 166% since 2009 and have increased 45% from historical averages.
- **McHuge Drive**- Traffic volumes have increased 23% near Forestvale Road.
- **Valley View Road west of Montana Avenue**- Traffic volumes are up 53% from 2009.
